Built Environment

Point of Disposal & Hygiene Solutions

Systems-led thinking

co-cre8 was founded with a vision that the much-needed transition to a more circular economy can only be achieved through systemic thinking.

From our many years of experience, in designing and implementing recycling programmes, we know that the success of any system, is directly linked to the point of contact with the consumer. Sadly, the historic approach of only providing consumers with bland and hard to follow 'binrastructure' has

never worked, resulting in lack of engagement and bins contaminated with material that has minimal value downstream.

Our success over the last five years, through operating the world-leading Simply Cups cup recycling scheme, has meant that we have developed expertise in these user touch-points, which we are now applying to the pressing matters of hygiene in the world's new normal.

Customised to your exacting requirements

The ability to quickly and easily communicate the correct messages at the point of disposal is fundamental to the success of any consumer touch-point.

To achieve a high quality and visually aesthetic interaction we can offer the following services to maximise engagement:

- Full design service
- Customised branding and messaging
- Range of finishes to match your environment

Whilst the pace of demand has meant that we now need to provide solutions in the short-term, in keeping with our vision and values, we will very quickly be able to use the most sustainable materials in the manufacturing process.

To achieve this, we have experience of designing and developing bespoke recycling processes to create a variety of new materials, including, plastics, polymers & composites, fibre & fibre composites and organic material.

New hygiene practices in the workplace

Once the UK corona virus lockdown has eased, all retail, commercial and business premises will need to implement new sanitation procedures to protect their employees, contractors and visitors.

The USA has already outlined it's 3 stage process which dictates 'good hygiene practice', with the sanitising of hands critical to this.

Businesses may also have to provide their workforce with appropriate Personal Protection Equipment (PPE) which could include masks, gloves and protective clothing. The safe disposal of PPE will be critical in ensuring minimal cross-contamination.

Hygiene and the point of disposal

Businesses will now need to make preparations in order to comply with any new requirements set out by the UK government.

This will likely to include the implementation of hand sanitising stations and bins to ensure the safe disposal of PPE.

To meet this demand, we now have a range of hygiene and disposal products ready for sale, as well as the capability to custom design and brand according to your requirements.

Cross contamination can be reduced by:

- Collecting used PPE as a separate waste stream
- Incorporating pedal or motion sensor operated bin lids
- Employing automatic hand sanitiser dispensing units

Mobile PPE disposal bin & hand sanitiser station metal fabrication

- Pedal operated bin lid* and automatic dispensing to limit cross contamination
- Bespoke branding included
- Premium design available in white semi-gloss painted finish
- 2 x A4 clip frames for updating user communication
- Managed dispense rate saving on cost of sanitiser
- UK designed and manufactured

*motion sensor opening options available on request

Technical Features:

- Lockable housing accommodating 60L bin
- Storage space for 5L sanitiser refill containers
- CE approved automatic sanitizer unit: refillable and lockable
- 1,000ml capacity with a 1.5ml dispense rate per use
- 1 year warranty
- Easy to move (4 lockable castors) and wipe down clean
- Unit size – 75.5cm W x 45.5cm D x 170cm H

Transparent door option available
for use in high risk environments

Units can be branded to customer requirements.
Please note that we can re-purpose this station
to collect other material streams.

Mobile PPE disposal bin & hand sanitiser station composite wood fabrication

- Circular open aperture
- Automatic dispensing to limit cross contamination
- Bespoke branding opportunities
- Premium design available in laminated finish
- 2 x A4 clip frames for updating user communication
- Managed dispense rate saving on cost of sanitiser
- UK designed and manufactured

Technical Features:

- Lockable housing accommodating 60L bin
- Storage space for 5L sanitiser refill containers
- CE approved automatic sanitizer unit: refillable and lockable
- 1,000ml capacity with a 1.5ml dispense rate per use
- 1 year warranty
- Easy to move (4 lockable castors) and wipe down clean
- Unit size – 75.5cm W x 45.5cm D x 165cm H

Units can be branded to customer requirements.
Please note that we can re-purpose this station
to collect other material streams.

Mobile PPE disposal bin composite wood fabrication

- Circular open aperture
- Bespoke branding opportunities
- Premium design available in laminated finish
- 1 x A4 clip frames for updating user communication
- UK designed and manufactured

Technical Features:

- Lockable housing accommodating 60L bin
- 1 year warranty
- Easy to move (4 lockable castors) and wipe down clean
- Unit size – 50cm W x 45.5cm D x 165cm H

Units can be branded to customer requirements.
Please note that we can re-purpose this station
to collect other material streams.

Automatic hand sanitiser dispenser station – floor standing

- Automatic dispensing to limit cross-contamination
- Bespoke branding included
- Premium design with a small footprint
- Base powder coating can be matched to any required colour
- Lightweight yet robust and sturdy
- Managed sanitiser dispense rate saving on cost of sanitiser
- UK designed and manufactured

Technical Features:

- Refillable and lockable
- CE approved
- 1,000ml capacity with a 1.5 ml dispense rate per use
- Powder coated mild steel construction
- Vinyl graphics applied as requested
- 1 year warranty
- Easy to move and wipe down clean
- Unit size – 25cm W x 39cm D x 150cm H
- Weight 10kg

Automatic hand sanitiser dispenser station – counter top

- Automatic dispensing to limit cross-contamination
- Bespoke branding included
- Premium design with a small footprint
- Base powder coating can be matched to any required colour
- Lightweight yet robust and sturdy
- Managed sanitiser dispense rate saving on cost of sanitiser
- UK designed and manufactured

Technical Features:

- Refillable and lockable
- CE approved
- 1,000ml capacity with a 1.5 ml dispense rate per use
- Powder coated mild steel construction
- Vinyl graphics applied as requested
- 1 year warranty
- Easy to move and wipe down clean
- Unit size – 25cm W x 20cm D x 35cm H
- Weight 2kg
